As we transition to a new platform that maintains the best of our VPN solution and adds the future-proof benefits of a Zero Trust architecture, we're thrilled to be expanding our use of BrightCloud® Threat Intelligence Services to bring our customers the most-up-to-date online threat data to fuel their decision making.

Christopher Kenessey, CEO, NetMotion Software

BrightCloud lends expertise to new NetMotion platform

NetMotion expands its use of BrightCloud® Threat Intelligence Services

NetMotion is a secure remote access platform that protects users and corporate resources while enhancing the user experience for remote workers. The company had been using select BrightCloud® Threat Intelligence Services to bolster its web-based risk detection capabilities. Since April 2019, BrightCloud services has helped to power NetMotion "Reputation," sold as an add-on to the Mobile IQ product.

Recently, NetMotion's launch of a fully-fledged security platform introduced powerful new features including a robust software-defined perimeter with digital experience monitoring to go along with the signature traffic-optimizing VPN tunnel. As part of this new platform, the previous Reputation SKU has been integrated into the product, coming standard with complete subscriptions. This update leverages BrightCloud threat detection capabilities across almost every deployment of the NetMotion platform.

BrightCloud brings enhanced threat data and detail to the NetMotion platform. It allows the NetMotion platform to provide IT admins with granular visibility into web risk categories accessed by users. Empowered with this information, admins can take action based on threat category, user, time of day and various other factors to curb inappropriate or inadvertent user behaviors.

About BrightCloud

BrightCloud was the first threat intelligence platform to harness the cloud and artificial intelligence to stop zero-day threats in real-time. The platform is used to secure businesses and their products worldwide with threat intelligence and protection for endpoints and networks. With more than 10 years of experience in building and analyzing the industry's most robust internet threat database, BrightCloud has the strongest coverage model, fewest uncategorized objects and the most historical records which others cannot replicate.

In 2019, BrightCloud was acquired by OpenText, a global leader in Enterprise Information Management. As a whole, we are a market leader in cyber resilience, offering total endpoint protection and disaster recovery for businesses of any size.
